YURII PIONTKOVSKYI

AI Product Engineer & Staff Engineer | Cloud-Native & Distributed Systems | Agentic Delivery

CONTACT

yurapion@gmail.com
Remote | Open to UK / EU / Global
Portfolio — yurapion.github.io
GitHub — yurapion
LinkedIn Profile

LANGUAGES

English — Professional working
Ukrainian — Native
Russian — Fluent

CORE SKILLS

- Microservices & distributed systems
- Event-driven / async architecture
- Cloud-native (AWS, Azure, K8s)
- Agentic AI workflows in production
- Data compliance & security
- Realtime UX (Socket.IO, SignalR)
- CI/CD & infrastructure as code
- Client-facing delivery & mentoring

TECH STACK

Languages
TypeScript, JavaScript, Go, C# (.NET), Dart, SQL

Frontend
React 17–18, Vite, Redux Toolkit, React Query, Apollo Client, MUI, SvelteKit, Flutter, Riverpod

Backend
NestJS, Node.js, Fastify, Go (chi, gqlgen), ASP.NET Core, MediatR, GraphQL (Hasura, Apollo), REST APIs, Socket.IO

AI / Agents
Claude API, remote MCP servers (OAuth), agentic workflows, LLM evals, prompt-driven runbooks, knowledge graphs

Cloud / Infra
AWS (Cognito, RDS, KMS, MSK, ECS, Lambda, SQS, DynamoDB, S3, CloudFront, SageMaker), Azure (App Service, AD B2C, Blob, PostgreSQL), Terraform, Docker, Kubernetes, LocalStack, DigitalOcean, Vercel

Data
PostgreSQL, TypeORM, InfluxDB, DynamoDB, Dgraph, KeyDB/Redis, Kafka, EF Core, Hasura

PROFESSIONAL SUMMARY

Staff engineer with **8+ years** building scalable, production-grade platforms in **healthcare**, **clinical VR**, **AI-assisted imaging**, **consumer media**, **travel**, and **SaaS**. At **YGO** I am an AI Product Engineer on a B2B AI travel platform, shipping an MCP server and agent-facing APIs. At **Evolve** I wrote and then delivered the cloud platform plan for a clinical headset: PostgreSQL, identity, and session authority in the cloud.

End-to-end ownership of **Node.js/TypeScript**, **Go**, **.NET**, **React**, and **Flutter** systems — from architecture through production, including infrastructure as code, NHS-grade data compliance, and CI/CD. I run **AI agents as a verified engineering multiplier** against live production systems, with runbooks and independent verification. Case studies: yurapion.github.io.

AI-ASSISTED ENGINEERING

Agents applied where the work can be checked — production operations, codebase intelligence, and product.

- Run AI agents against **live production systems**: CardMedic translation rollouts execute from written runbooks — dry-run, small live test, then language-by-language rollout with DLQ alarms as the safety net.
- Operate a measured **multi-agent development workflow**: a frontier model plans and reviews, cheaper agents do read-heavy work, an independent agent verifies.
- Built **graphify** (codebase → queryable knowledge graph, used daily across three client repos) and **DevPrep**, an AI-first interview product on the Claude API.

EXPERIENCE

YGO — B2B AI Travel Platform

AI Product Engineer | Oct 2026 – Present | Remote

Go + PostgreSQL backend, SvelteKit apps, and a multi-agent LLM layer licensed to tour operators and airlines. I plan, specify and verify; agents write the code, and every change is checked live in production.

- Designed and shipped the **YGO Console MCP server** (mcp.ygo.ai): a remote **Model Context Protocol** server with OAuth sign-in that lets Claude, ChatGPT, Cursor and Claude Code read a customer's projects and hotels and leave hotel feedback: design doc, spike, and the first six tools.
- Write tools **preview before they write**: feedback tools show the destination and require a confirm; **request_capability** records what the server cannot do yet, so the roadmap comes from agent demand. Every call mirrors an audit line to Slack.
- Built **threaded customer feedback** in the Go backend: migration, one shared write core used by the API and the MCP, reply endpoints on two API surfaces, OpenAPI specs and runbooks. Model-drafted replies stay marked AI-generated.

Evolve (via Honeycomb Software)

Staff Engineer | Sep 2026 – Nov 2026 | Remote

*Cloud platform for a clinical VR headset with biosensing. Hired on a case study that became the platform plan: the cloud as the trust and session-orchestration plane, **PostgreSQL** as the application database, session authority moved from the headset into the cloud. I owned that plan end to end with one other engineer, held code-owner approval, and delivered about **130 Jira tickets** and 5 ADRs in three months.*

- Introduced **PostgreSQL** to the platform and shipped the database layer: TypeORM schema-as-code, the organization as tenant key on every row, **row-level security**, and least-privilege roles per service that do not own the tables, so a policy cannot be bypassed silently. RDS IAM sign-in behind a switch.
- Owned the **AWS cloud layer** in **Terraform** across five environments: per-environment **KMS** encryption for RDS, S3, Redis, MSK and DynamoDB (verified live in production), CloudFront CSP/HSTS, SES, and **Cognito** identity for operators and devices. Ran every dev and production apply; owned the **GitHub Actions** pipelines and the LocalStack + Kafka + InfluxDB local stack.
- Designed and built **Session Authority** in **NestJS** with the second engineer: the session state machine, operator takeover under a row lock, presence reconciliation, timers claimed from Postgres with SKIP LOCKED, and a typed command/refusal contract to the headset over Socket.IO.
- Shipped the **React 18 + Vite** operator app for a live headset session (run lifecycle, check-ins, consent, signal quality, live EEG spectra) and the **reports pipeline**: Kafka-backed export and report queues, a report worker, and a conformance-checked contract for the data-science code.

DevOps / Quality
GitHub Actions, Bitbucket Pipelines, Drone CI, Flux/ArgoCD, Helm, SonarQube, Testcontainers, Sentry, Prometheus/Grafana

INDUSTRIES

- Travel / B2B AI platforms
- Clinical VR / biosensing
- Healthcare & NHS
- Medical imaging & AI/ML
- Consumer media & insights
- Hospitality / restaurant SaaS

METHODS & PRACTICES

- Agile / Scrum, remote-first delivery
- Schema-as-code (SQL migrations, EF Core)
- Feature flags for safe vendor migration
- Clean Architecture, CQRS (MediatR)
- Git, trunk-based and branch-based flows

SECURITY & COMPLIANCE

- PostgreSQL row-level security keyed on the organization
- Per-environment KMS keys, AES, S3 SSE, HMAC
- NHS / clinical multi-year retention
- OAuth2, Cognito, Azure AD B2C, JWT
- Tenant & role-scoped access (Hasura, claims)

LEADERSHIP

- Directed an engineer on the Evolve platform and held code-owner approval on Tier 2 changes.
- At YGO: own requirements, planning and verification while agents write the code.
- Mentored interns and juniors through code-level guidance and PR reviews.
- Direct client communication on priorities, trade-offs, and delivery timelines.

EDUCATION

Bachelor, Computer Engineering
Taras Shevchenko National University of Kyiv
2013–2017

Blum Health (via Honeycomb Software)

Senior Full-Stack Engineer | Jul 2023 – Nov 2026 | Remote

Lead engineer across three concurrent client products spanning healthcare, medical imaging AI, and restaurant SaaS — owning architecture, delivery, and client communication on each.

CardMedic — Healthcare Communications Platform

• Architected **9 Node.js/TypeScript microservices** on AWS (Lambda, API Gateway, DynamoDB, SQS/SNS, S3, Cognito) serving **200+ REST endpoints** across three environments — deployed across **20+ NHS trusts**.

• Scaled translation throughput with **21 sharded SQS queues**, batching, DLQ monitoring, and CloudWatch → Slack alerting — sustaining **100k+ translation jobs / month** without API throttling.

• Implemented **NHS data compliance**: AES encryption at rest, 8-year retention, HMAC webhook verification, and a feature-flagged vendor migration path (Smartcat). Delivered the **React** admin platform and a **Flutter** app with **55 locales**, RTL, and screen-reader accessibility.

AI Sight Suite — Clinical Imaging & AI Screening

• Built a **.NET 10 Clean Architecture** backend with **100+ REST endpoints**, a rich domain model (~80 entities), **PostgreSQL** via EF Core, and **LanguageExt** Either/Option for explicit, functional-style error handling.

• Designed a **cross-cloud architecture**: Azure for hosting, identity (AD B2C), and blob storage; **AWS SageMaker** for dual-model AI inference with Signature V4 auth — processing **5,000+ retinal screenings** across pilot clinics.

• Delivered **tiered clinical audit** (5/10-year retention), DICOM pipelines, **Xero** billing, and a **React 18 + Vite** SPA with SignalR realtime grading updates; quality held by **Testcontainers**, **SonarQube** in Bitbucket Pipelines, and **Terraform**-managed Azure infrastructure.

AccentPOS — Restaurant & Venue Management SaaS

• Designed a **Hasura + Fastify** architecture with **14 event-trigger webhooks** separating GraphQL data access from imperative business logic — backed by **PostgreSQL** with ~330 SQL migrations, live across **30+ venues**.

• Built commerce flows end to end (payments, **QR payment links**, served/takeaway/delivery) and integrated **PayPal, Dojo, Deliverect, Xero**, and **AWS Cognito**, bridging Cognito JWT into Hasura session variables for **tenant-scoped** access control.

• Delivered a **React** operations platform (Apollo + subscriptions, MUI, DevExpress Scheduler) with **Docker Compose + Traefik** for local dev and role-scoped dashboards.

Wunder AI

Senior Full-Stack Engineer | Mar 2020 – Sep 2023 | Remote

Cosnova / Wunder AI — connected product ecosystem: consumer festival experiences, B2B insight dashboards, and a shared Go/GraphQL backend.

• Built **React** frontends on a shared **Apollo GraphQL + WebSocket** layer: Playtime (**20 branded app configs** from one SPA, 35+ template types, adaptive video, maps, barcode scanning) reaching **100k+ festival attendees**, and **LiveMind** realtime session mirroring via shared GraphQL subscriptions.

• Contributed to **cosnova-mono**, a large-scale **Go + gqlgen** backend monorepo with polyglot persistence (**Dgraph, PostgreSQL, KeyDB, Kafka**) and a rule-based inference engine for consumer profiling.

• Delivery via **Drone** → **Kaniko** → **ACR** → **Kubernetes**; **Flux/ArgoCD** for GitOps, Helm charts, Prometheus/Grafana/Loki observability.

Freelance / Contract

Full-Stack Engineer | Mar 2017 – Mar 2020 | Remote

• Delivered multi-tenant **React** dashboards and **Node.js / Express** REST APIs on PostgreSQL and MongoDB (JWT auth, RBAC, Stripe), containerised with **Docker** and shipped through GitHub Actions / GitLab CI, working directly with founders on scoping and delivery.
